- Text-to-Speech
- iGo Primo Nextgen navigation software
- Utilizes the Alpine radio antenna and GPS Satellite connection

NAVIGATION WHEREVER YOU GO

Get access to the latest maps without relying on a smartphone or Wi-Fi connection with the KTX-NS01 Navigation Module. The KTX-NS01 is a compact module that plugs into the USB port of compatible Alpine radios via an included 10cm cable and utilizes the Alpine radio antenna and a GPS Satellite connection to provide onboard navigation no matter where your next adventure takes you.

OFF-ROAD MODE

Go off the beaten path with Off-Road Mode on the KTX-NS01. Off-Road Mode provides vehicle data (tire pressure, battery voltage, GPS coordinates), tracking of trail distance/time, and compass readings. The off-road navigation database includes Points of Interest (POIs) for vehicular recreational areas, FunTreks trailheads, and U S. campsites. You can also revisit trails through Off-Road Mode trip recording.

Navigation Features

After plugging the KTX-NS01 into the Alpine radio, a navigation app will appear on the home screen, providing instant access to the HERE map database with maps of the United States and Canada. Voice prompts for turn-by-turn directions are also available and are projected from the vehicle’s sound system.
