AL Priority Anti-Laser Defense System

Brand: AL Priority
Product Code: ALP-CONTROL
Stock: 2
MPN: ALP Control Unit

Price: $1,339.99

Short Description

The **AL Priority Dedicated Laser Defense System** is a modular, professionally installed laser-defense platform with discreet exterior sensors, CPU V6 control, GPS integration and expandable front/rear coverage. Starting at **$1,339.99 + professional installation**. Pair it with an ESCORT Redline 360c or Redline Ci-c radar system for comprehensive radar detection and dedicated laser defense.

Description

AL Priority Dedicated Laser Defense System

Protect your vehicle with one of the most advanced modular **dedicated laser defense platforms** available. AL Priority combines compact exterior laser sensors, a powerful expandable control platform, GPS capability and vehicle-specific professional installation into a system designed for serious driving enthusiasts.

Unlike a conventional windshield-mounted detector, AL Priority uses **discreet exterior optical sensors** strategically positioned around the vehicle. The system can be configured for the size, shape and design of the individual vehicle, with additional front sensors, rear coverage, Bluetooth

control and voice alerts available depending on the level of protection desired.

AL Priority Dedicated Laser Defense System

Starting at $1,339.99 + Professional Installation

Base Access 1 configuration includes 2 laser sensors, GPS antenna and AL Priority control unit.

Professional installation is required and priced separately based on the vehicle, sensor quantity, placement and desired front/rear coverage.

Want comprehensive radar + laser protection?

Pair AL Priority with a premium ESCORT radar detector such as the ESCORT Redline 360c or the completely concealed ESCORT Redline Ci-c for premium radar detection combined with dedicated AL Priority laser defense.

AL Priority System Highlights

- Advanced modular laser detection and defense platform
- Compact exterior laser sensors for discreet installation
- AL Priority CPU V6 main control platform
- GPS integration
- Expandable front and rear sensor configurations
- Optional Bluetooth smartphone interface
- Optional Hi-Fi voice alerts
- Optional rear laser protection
- Expandable multi-sensor configurations for larger vehicles
- Pairs with premium portable or custom-installed radar detection systems
- Upgradeable firmware for continuing system development
- Professionally installed and configured for the individual vehicle

Designed Around Your Vehicle

Effective laser-system performance begins with proper sensor placement. Every vehicle presents different grille openings, body contours, lighting assemblies, reflective surfaces and installation challenges, which is why AL Priority is designed as a configurable platform rather than a one-size-fits-all product.

Access 1 technicians determine appropriate sensor positioning for the individual vehicle while maintaining a clean, discreet appearance. Sensors are carefully mounted and aligned, wiring is concealed wherever possible and the control components are integrated into the vehicle rather than simply attached as an aftermarket accessory.

Advanced Laser Defense Technology

Police LIDAR operates differently from conventional radar. A laser measurement uses a narrow optical beam aimed directly at a vehicle, leaving very little time for a conventional windshield-mounted detector to provide advance warning.

AL Priority addresses this challenge with externally mounted optical sensors and high-speed processing designed specifically around automotive laser technology. The system continually monitors for compatible laser signals and provides immediate alerts when activity is detected.

Expandable Front & Rear Coverage

AL Priority's modular architecture allows the system to grow with your needs. Many installations begin with front protection, while additional sensors can be added for wider coverage, larger vehicles or rear protection.

Vehicle color, front-end design, installed accessories, sensor positioning and desired coverage all influence the final configuration. This flexibility allows Access 1 Alarm & Audio to build the system around the vehicle rather than forcing every installation into the same layout.

CPU V6 Control Platform

The current AL Priority platform uses the **CPU V6 main control unit** as the heart of the system. The controller manages connected laser sensors and optional accessories while providing the expandable architecture required for more advanced installations.

Depending on the configuration selected, the system can support additional functionality including Bluetooth connectivity, GPS integration, additional front and rear sensors and compatible radar-system integration.

Continuous Firmware Development

One of AL Priority's important advantages is its software-upgradeable architecture. As supported laser-enforcement technology evolves, compatible AL Priority hardware can receive firmware updates designed to update detection and processing capabilities.

This makes professional installation and proper system configuration especially valuable because the hardware can remain integrated into the vehicle while the software platform continues to develop.

Optional Bluetooth Smartphone Control

Add the optional AL Priority Bluetooth interface to access supported system functions from a compatible smartphone. Bluetooth integration provides a cleaner interior installation while allowing compatible configuration, diagnostics, updates and system controls to be accessed through the AL Priority mobile environment.

Optional Hi-Fi Voice Alerts

For drivers who prefer detailed audible information, an optional Hi-Fi voice-alert interface can provide clear spoken notifications rather than relying only on basic alert tones.

Dedicated Laser Defense + Premium Radar Detection

AL Priority is a **dedicated laser-defense platform**. For customers who also want premium radar detection, Access 1 can build a system using AL Priority for laser defense while a separate ESCORT detector handles radar.

Choose the windshield-mounted **ESCORT Redline 360c** for flagship portable radar detection, or combine AL Priority with the **ESCORT Redline Ci-c** for a completely concealed custom-installed radar and laser solution.

Why You'll Love It

- **Discreet installation:** Compact sensors integrate cleanly into many cars, trucks, SUVs and performance vehicles.
- **Vehicle-specific configuration:** Sensor quantity and placement can be tailored to the individual vehicle.
- **Expandable protection:** Begin with front coverage and add rear or additional sensors when desired.
- **Upgradeable platform:** Firmware updates allow compatible hardware to evolve with changing technology.
- **Smartphone capability:** Optional Bluetooth integration provides convenient system access.
- **Voice alerts:** Optional Hi-Fi voice capability provides clear audible notifications.
- **Radar pairing:** Combine dedicated AL Priority laser defense with premium ESCORT radar detection.
- **Professional integration:** Wiring, sensors, controller and optional equipment are installed as a complete vehicle system.

System Configuration

System	AL Priority Dedicated Laser Defense
Vehicle Applications	Cars, Trucks, SUVs, Performance and Luxury Vehicles
Main Controller	AL Priority CPU V6 Platform
Base Access 1 Configuration	2 Laser Sensors, GPS Antenna and Control Unit
Front Coverage	Expandable Multi-Sensor Configuration
Rear Coverage	Optional
GPS	Included in Access 1 Base Configuration
Bluetooth	Optional
Voice Alerts	Optional Hi-Fi Voice Interface
Radar Pairing	Separate premium radar detection available, including ESCORT Redline 360c and Redline Ci-c systems
Firmware Updates	Supported
Installation	Professional Installation Required and Additional

Professional Installation Is Critical

Laser sensor installation is substantially more precise than installing a conventional radar detector.

Sensor height, horizontal alignment, vertical alignment, spacing, vehicle bodywork and unobstructed optical visibility can all affect system performance.

Access 1 Alarm & Audio professionally installs each sensor and routes wiring through the vehicle using methods intended to preserve the vehicle's appearance. After installation, the system is configured and checked to verify that the components are communicating and operating correctly.

The Access 1 Advantage

Access 1 Alarm & Audio specializes in integrated radar and laser systems for performance, luxury, enthusiast and daily-driven vehicles throughout Cleveland and Northeast Ohio. Rather than simply selling equipment, we design the installation around the individual vehicle and the level of coverage you want.

- Professional vehicle-specific sensor placement
- Clean, discreet exterior installation
- Concealed interior wiring and controller integration
- Front and rear system configuration
- Bluetooth and voice-alert integration
- ESCORT radar + AL Priority laser system combinations
- System setup and configuration
- Local installation and product support

Final system pricing depends on the number of sensors, optional equipment, vehicle configuration, installation requirements and desired coverage.

Important: Radar and laser countermeasure laws vary by jurisdiction. Vehicle owners are responsible for understanding and complying with all applicable local, state, provincial and federal laws where the vehicle is operated.

Product specifications, compatibility, firmware information and available AL Priority accessories may change. Visit the official AL Priority website for the latest manufacturer information.
